

**Mail Drop:** If you want to send large files via email, you can use iCloud Mail Drop feature. When you send an email of size more than 20MB, Mail Drop automatically kicks in. Instead of sending the file through the Apple email server, it uploads the file to iCloud and posts a link or preview to your recipients. The link is temporary and will **expire after 30 days**.

If the recipient also has macOS 10.10 or later, the attachment gets quietly auto-downloaded in the background. And if you're sending it to another email provider, the message contains an indication of the file's expiration date and a **Click to Download** link.

With Mail Drop, you can send big files up to 5GB in size. You can send them from Apple Mail, the Mail app on iOS, and iCloud.com on Mac and PC. Mail Drop support every file types and attachments don't count against your iCloud storage. For more details, see Apple's [Mail Drop limits](#) page.
